How to open Tank Counters Beat-up on Android (before beta)

1. Download Tank Counters Beat-up from
Gamejolt:https://gamejolt.com/games/tankcountersbeatup/845308
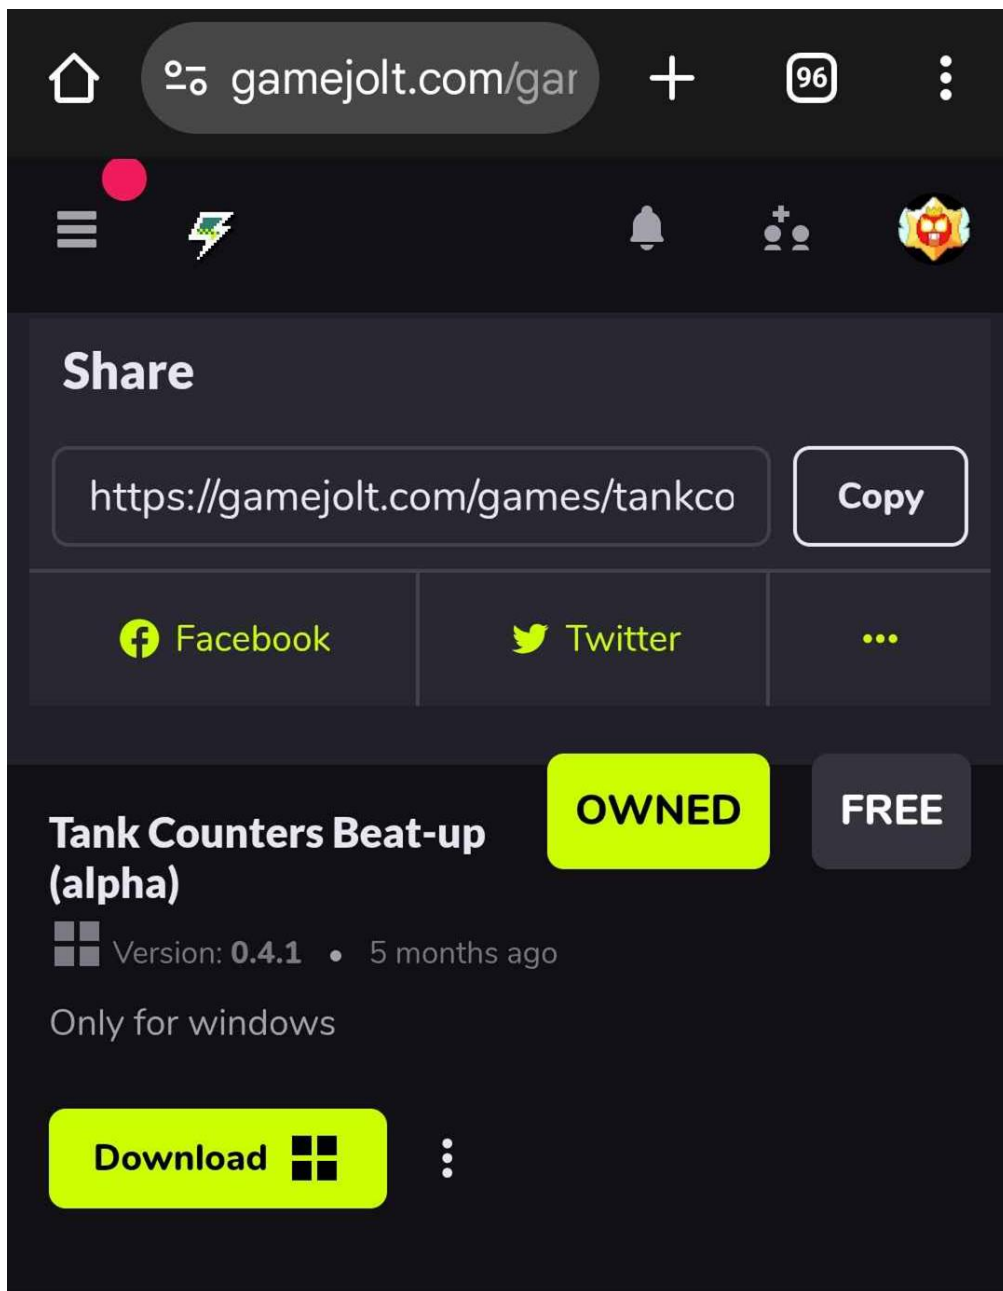

2. Download RAR from Google Play.

RAR

RARLAB (published by win.rar GmbH)

Zainstaluj

3. Unzip the game in RAR.

How to unzip it?

I. Find the zipped game in your Downloads folder. Its name is tcb.zip

II.Once you entered tcb.zip, tap the icon in the circle.

III. Proceed with the extraction process. You can specify the path and even change the name of the exctracted folder if you want. In this guide its name will stay as tcb and be located in the Downloads folder.
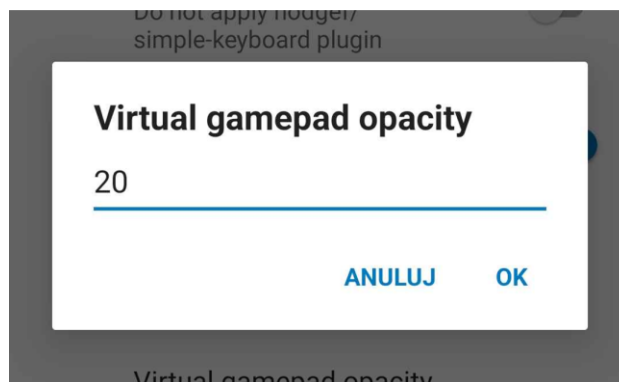

4.Download MaldiVes here:https://maldives-player-rpg-mv-mz.en.uptodown.com/android

5.Adjust some settings:

I. Enter Accessibility settings and disable virtual keyboard. TCB doesn't require that.
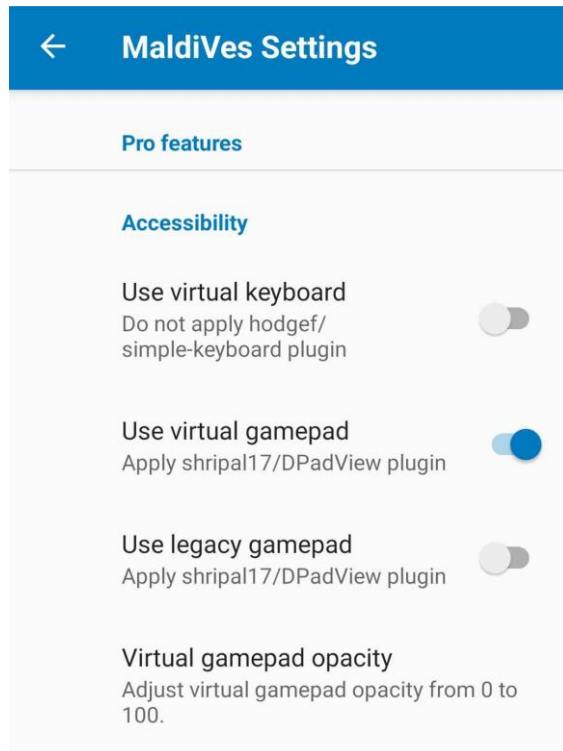

II.Also in Accesibility settings, I'd recommend setting the gamepad's opacity to something lower, like 20. On default it's set on 66 and I think it's too much in my opinion.
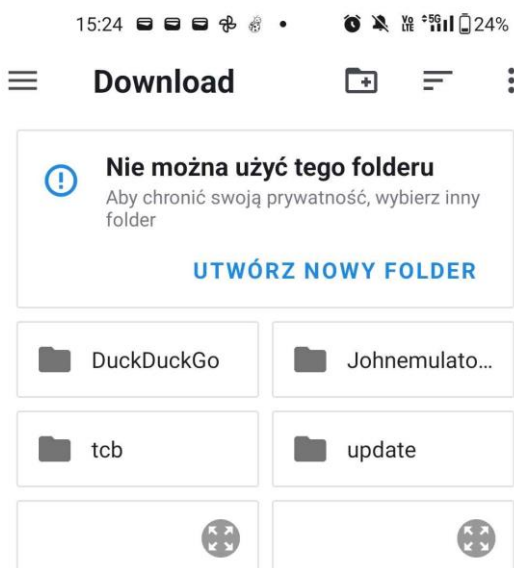

6.Exit the settings and tap „Add a new game".

The app will ask you to specify the game's file path.

I.Enter tcb or whatever name of your choice for the game files back when you were extracting them in RAR.

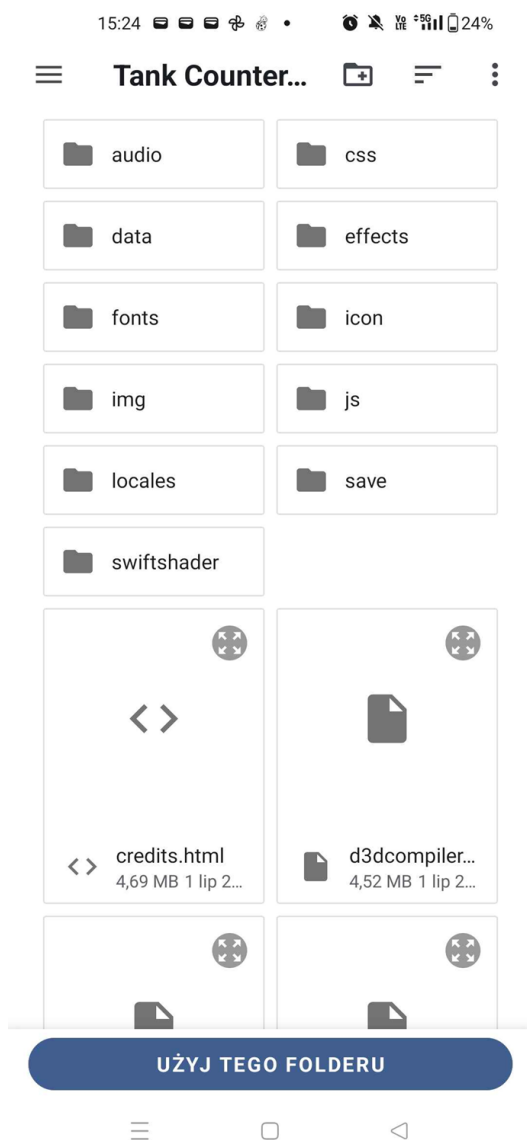

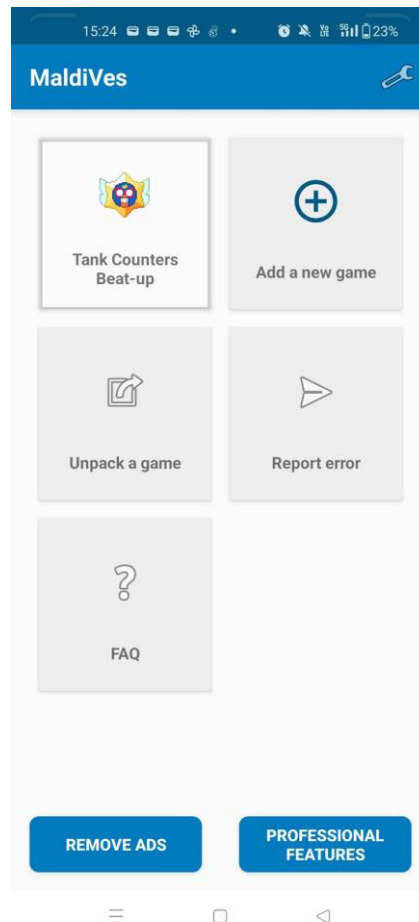

II. Enter Tank Counters Beat-up.

III. Enter the Tank Counters Beat-up folder once again.

IV. Tap „USE THIS FOLDER" on the bottom of the screen.

7. Now you should be able to see Tank Counters Beat-up on your menu screen.

8.Run the game, without using any bonus options here.

9.It works! Now all you have to do is tap the plus icon on the bottom.

10.You're all set! Enjoy!
